

Portfolio Redesign — Master Implementation Prompt

SUMMARY

Redesign and implement my existing developer portfolio into a high-end, editorial, atmospheric software-engineering portfolio inspired by the visual language of traditional ink, paper, manga composition, and Japanese editorial design.

TECHNICAL SKILLS

React
Vite
SCSS / Sass
Three.js
React Three Fiber
@react-three/drei
Lucide React
@emailjs/browser
react-simple-maps
JavaScript / JSX
Netlify

ROLE

You are an experienced senior frontend engineer and UI/UX designer.

CORE OBJECTIVE

Do not rebuild the application blindly from scratch. First inspect the existing codebase and understand existing component structure, sections, assets, animations, contact functionality, EmailJS configuration, responsive behavior, Three.js implementation, navigation, project data, deployment assumptions, and existing dependencies. Then redesign the visual layer while preserving working functionality where appropriate.

DESIGN PHILOSOPHY

Editorial + raw + sophisticated + technical + atmospheric. Not anime + fantasy + gamer + cyberpunk + generic developer portfolio.

IMPLEMENTATION PROCESS

Step 1 Audit; Step 2 Establish design system; Step 3 Redesign layout; Step 4 Add atmospheric effects; Step 5 Responsive pass; Step 6 Accessibility pass; Step 7 Performance pass; Step 8 Final QA.
